Edgewater Technology – Wakefield, MA *“Mini” Conference Centers*

As a response to client’s program requirement of providing semi-private conference centers that are readily recognizable and are able to be identified as occupied or vacant on a “first come – first served” basis from a distance, furniture panels extending to a soffit above were utilized to create areas in strategic locations throughout the floor plate.

When not in use, these areas, termed “minis”, exhibit a continuous ring of blue LED accent lighting in the “on” position with all other lighting “off”.

Upon being entered, an occupancy sensor switches off the accent band and turns on the interior lights along with recessed can lights at the soffit to signify the mini is in use.

More than 120 workstations and 13 minis comprise the open office areas.
