The Bridge – Washington Township, PA (related experience with Peterson Griffin Architects)

A mall originally constructed in the 1950s, complete with an open interior courtyard as its central feature was renovated to provide an updated facility, protected from the elements. The program was to include several “white box” tenant spaces, coordination with a primary restaurant tenant and the complete design of the anchor store “Home Place”. The focal point of the anchor store was an elevator sequence opening directly to the main merchandise area.
